Create catchy graphics to tell USAID's stories!

Project Title	Create catchy graphics to tell USAID's stories!
Project Summary	Do you think in pictures? We're looking for visual storytellers to tell the story of USAID Philippine's, Pacific Islands and Mongolia's projects and their impacts. This position is perfect for a self-paced, independent individual who is great with visualizations and graphic design.
Country	Philippines

Project Description

Help us tell the stories of our work in the Philippines, the Pacific Islands and Mongolia! We are looking for someone to take compelling content and help tell our stories through a data visualization for use in social media, our websites, internally with our stakeholders, and with our host country governments.

We work on projects ranging from providing COVID frontliners with needed equipment, working with poor fishing communities to improve their livelihoods in fishing, protecting natural resources, and empowering women. You will work with people in various countries, on the front line, to obtain stories and reports, and transform these into data visualizations to share our work in a simple format. Help us educate and inform our numerous stakeholders. If you're interested in making a difference, this position is for you!

You should have a critical eye for taking compelling reports and stories, and distilling them to simple yet creative visualizations. Interns should have working knowledge of Canva, or a proven ability to learn quickly.

Required Skills or Interests

Skill(s)
Data visualization
Graphic design
Storytelling/blogging/vlogging
